

## How to Connect?

1. After writing OS, insert the micro SD card to Raspberry Pi.
2. Install 4 brass standoffs.

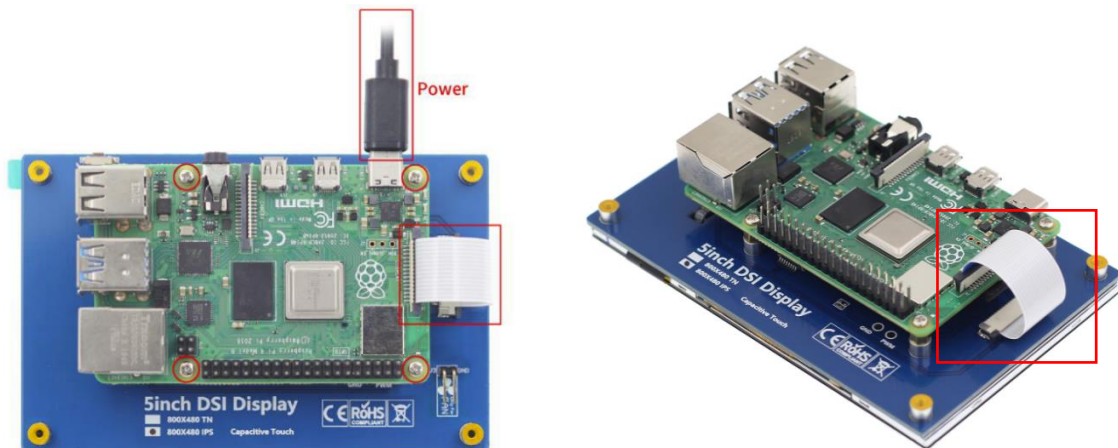

3. Connect the ribbon cable.

**Note:** Pay attention to the blue bar on the cable when connecting.

4. Fix the Raspberry Pi with 4 screws. Connect ribbon cable and then connect power.

5. If the screen doesn't display normal, modify config.txt in Raspberry Pi terminal:  
`sudo nano /boot/config.txt`

Add # in front of "dtoverlay=vc4-fkms-v3d".

`dtoverlay=vc4-kms-v3d → # dtoverlay=vc4-kms-v3d`

Ctrl+X → Y → Enter to save. Then reboot Raspberry Pi.
